Reload to refresh your session. Login to post I could save you lots of time. The 2 most common failures of this engine is on the carburetor. The parts that fail are the diaphragm Item 394 and the primer bulb Item 976 of this link Carb data is in section 3 of the first link. Thanks for choosing FixYa, Kelly.We have removed the carbuetor and cleaned it out even though it was not dirty and replaced the spark plug.Just runs for a minute and kills.it is getting too much fuel. Answer questions, earn points and help others. NOTE, please check your code and date numbers to be positive of correctness. Thank you. If you need further help, I'm available over the phone at Torque in a crisscross pattern upper left lower right upper right or left or right. Do not operate the mower for some hours to allow the oil drain inside the engine. Check oil level and fill it if necessary. Some oil remaining in the exhaust should be burnt next time the lawnmower operates.You will see smoke at the beginning, that will be normal burnt oil. Hope this helps!Login to post Oil is coming out of the muffler.

Any ideas I hope its a head gasket instead of the rings. Good Luck! JimI use the black nozzle attachment, the proper lines are open but no soap comes out. I just dont know if its a pump problem being as the washer itself works fine. Hold times are long. The spark plug ignites the fuel and air

mixture in the cylinder to power the engine. If the spark plug is burnt, fouled or damaged the engine may not start or may run rough. The filter screen is on the large side of the housing. The port on the large side goes to the fuel tank while the port on the small side of the housing goes to the carburetor. The flywheel key aligns the flywheel in the correct position on the crankshaft. If the engine stops suddenly due to hitting a hard object, the flywheel key shears in half to prevent damage to the engine. If the flywheel key is broken, the engine wont start. The starter gear engages the flyhweel to start the engine. If the teeth on the starter gear are worn out, the engine may not start. If the carburetor is leaking, one of the float bowl gaskets may be worn out. Be sure that all surfaces are clean and dry before installing this gasket. Do not use solvents or gasket sealer on this gasket. The ignition coil sends voltage to the spark plug while the engine is running. If the ignition coil is defective, the engine may not start. If the air filter is clogged or dirty, the engine might not start, might be hard to start, or might run roughly. This filter should be replaced periodically to ensure optimal engine performance. Since 1912, weve learned to recognize the most common problems. Do any of these look familiar. Join Repair Clinics VIP email list for 10% off, plus other discounts and tips.
